Process Mining: A Data Driven Approach

Presented by: Chris Stork, PhD, Sandia National Laboratories

This workshop provides an overview of process mining, an emerging scientific discipline linking process modeling and data-oriented analysis. Process mining enables us to discover, monitor, and improve real processes through the extraction of knowledge contained in event log data.

LEARN

Presented by experts at the forefront of their field, sessions focus on skills and offers practical suggestions for applying them in real-world situations.

CERTIFICATION

Demonstrate your commitment to upholding quality standards and continued learning to earn Quality Certificate from the UNM Anderson School of Management
.

NETWORK

Meet prospective mentors, partners, and clients, and gain access to the resources that will foster your career development
